BUSINESSES MUST PRIORITIZE THE OCEAN PLASTIC POLLUTION CRISIS

Plastic pollution is a global environmental issue that is growing at a rapid pace:

Every year, people collectively dump 11 million metric tons of plastic into the ocean, harming roughly 800 species via ingestion or entanglement.¹

The Plastic Waste Makers Index expects plastic production to grow by 30% by 2026.²

If businesses don't make drastic changes to plastic waste habits, plastic in the ocean could potentially outweigh the number of fish by 2050.³

We must act now to reverse the damage done to our oceans:

The public views plastic pollution as the top priority for restoring ocean health.⁴

Nearly half of people worldwide expect manufacturers to pave the way for tackling issues regarding plastic waste.⁵

80%

If organizations shift their plastic waste habits, it will decrease the amount of ocean plastic waste by roughly 80% by 2040.¹
